class - 2

ide - IntelliJ

↳ Java
- ↳ variables
- ↳ functions / methods
- ↳ file
- ↳ class (optional) →

] → common in all prog languages

variables

x = 5 ; int x = 5

String name = "Mainak"

pass it, to someone else

function :-

print("mainak") X → print(sai) X

print(Mahesh)

{ sayMyName(String name) {
print(name) → variable
}

sayMyName("sai")
sayMyName("Mahesh")

if you have a piece of code → reusable
↳ wrap it in a function

4 { ≡ } → f() { ≡ } → instead of re-writing the 4 lines

5

file :→ Every code you write → <filename>.java file
↳ code should be written in seperate logical files

Java → classes / objects

class Test {
variable
function
f1()
f2()
}

Test.java

obj of class Test
↳ t1

t1.f1()
t1.f2()

what is the entry point of my code ?
↳ main method → main.java file
↳ entry point

class 1 {
f1() { }
}

class 2 {
f2 { }
}

class 3 {
f3 { }
}

f() {
→ class3 (c1) → variable / object
c1.f3();
}

class3 anuruta
anuruta.f3()

[↳ [v, f, f] → classes
↳ v
↳ f ✓

variable / object of a class → c1
c1.f

{ Debugging through IDE } ✓
