

class - 4

↳ OOPS

- ↳ inheritance
- ↳ Encapsulation
- ↳ polymorphism
- ↳ Abstraction

} } → Imp

Encapsulation →

↳ object → variables & functions

↳ related V & func should belong to a Unit

↳ Unit → class

age
gender
getInfo

class student {

age
gender
Name

} members

→ No access

getAge() {}

getInfo() {}

} functions

✓ age → getter
setter

getAge() { returns {
age;

✓ setAge(int x) {
age = x;
}

private / public

class student {

private Name
private Age

public

[getName() {} ;
set Name() {} ;

public

[getAge
setAge
other fu

Main() {

Student S1 = new student();

S1.getAge
S1.setAge } getters
setters

S1.Name = "Sai"; (X)

S1.age = 28; ✓

If you're creating classes → Encapsulation

Inheritance

P → C
↳ classes

Parent {

[function() {}]

child → Parent {

}

child should have the func

child C1 = new C();

C1.func(); ✓ →

child extends parent {

}

Main() {

P1

P1.f1() X → f1 is private

P1.f2() ✓

C1

C1.f1() (X) → No f1 present

C1.f2() ✓

class P {

private f1() {}

public f2() {}

}

✓ class C extends P {

}
