

Class 7

↳ oops → splitwise ✓ → App

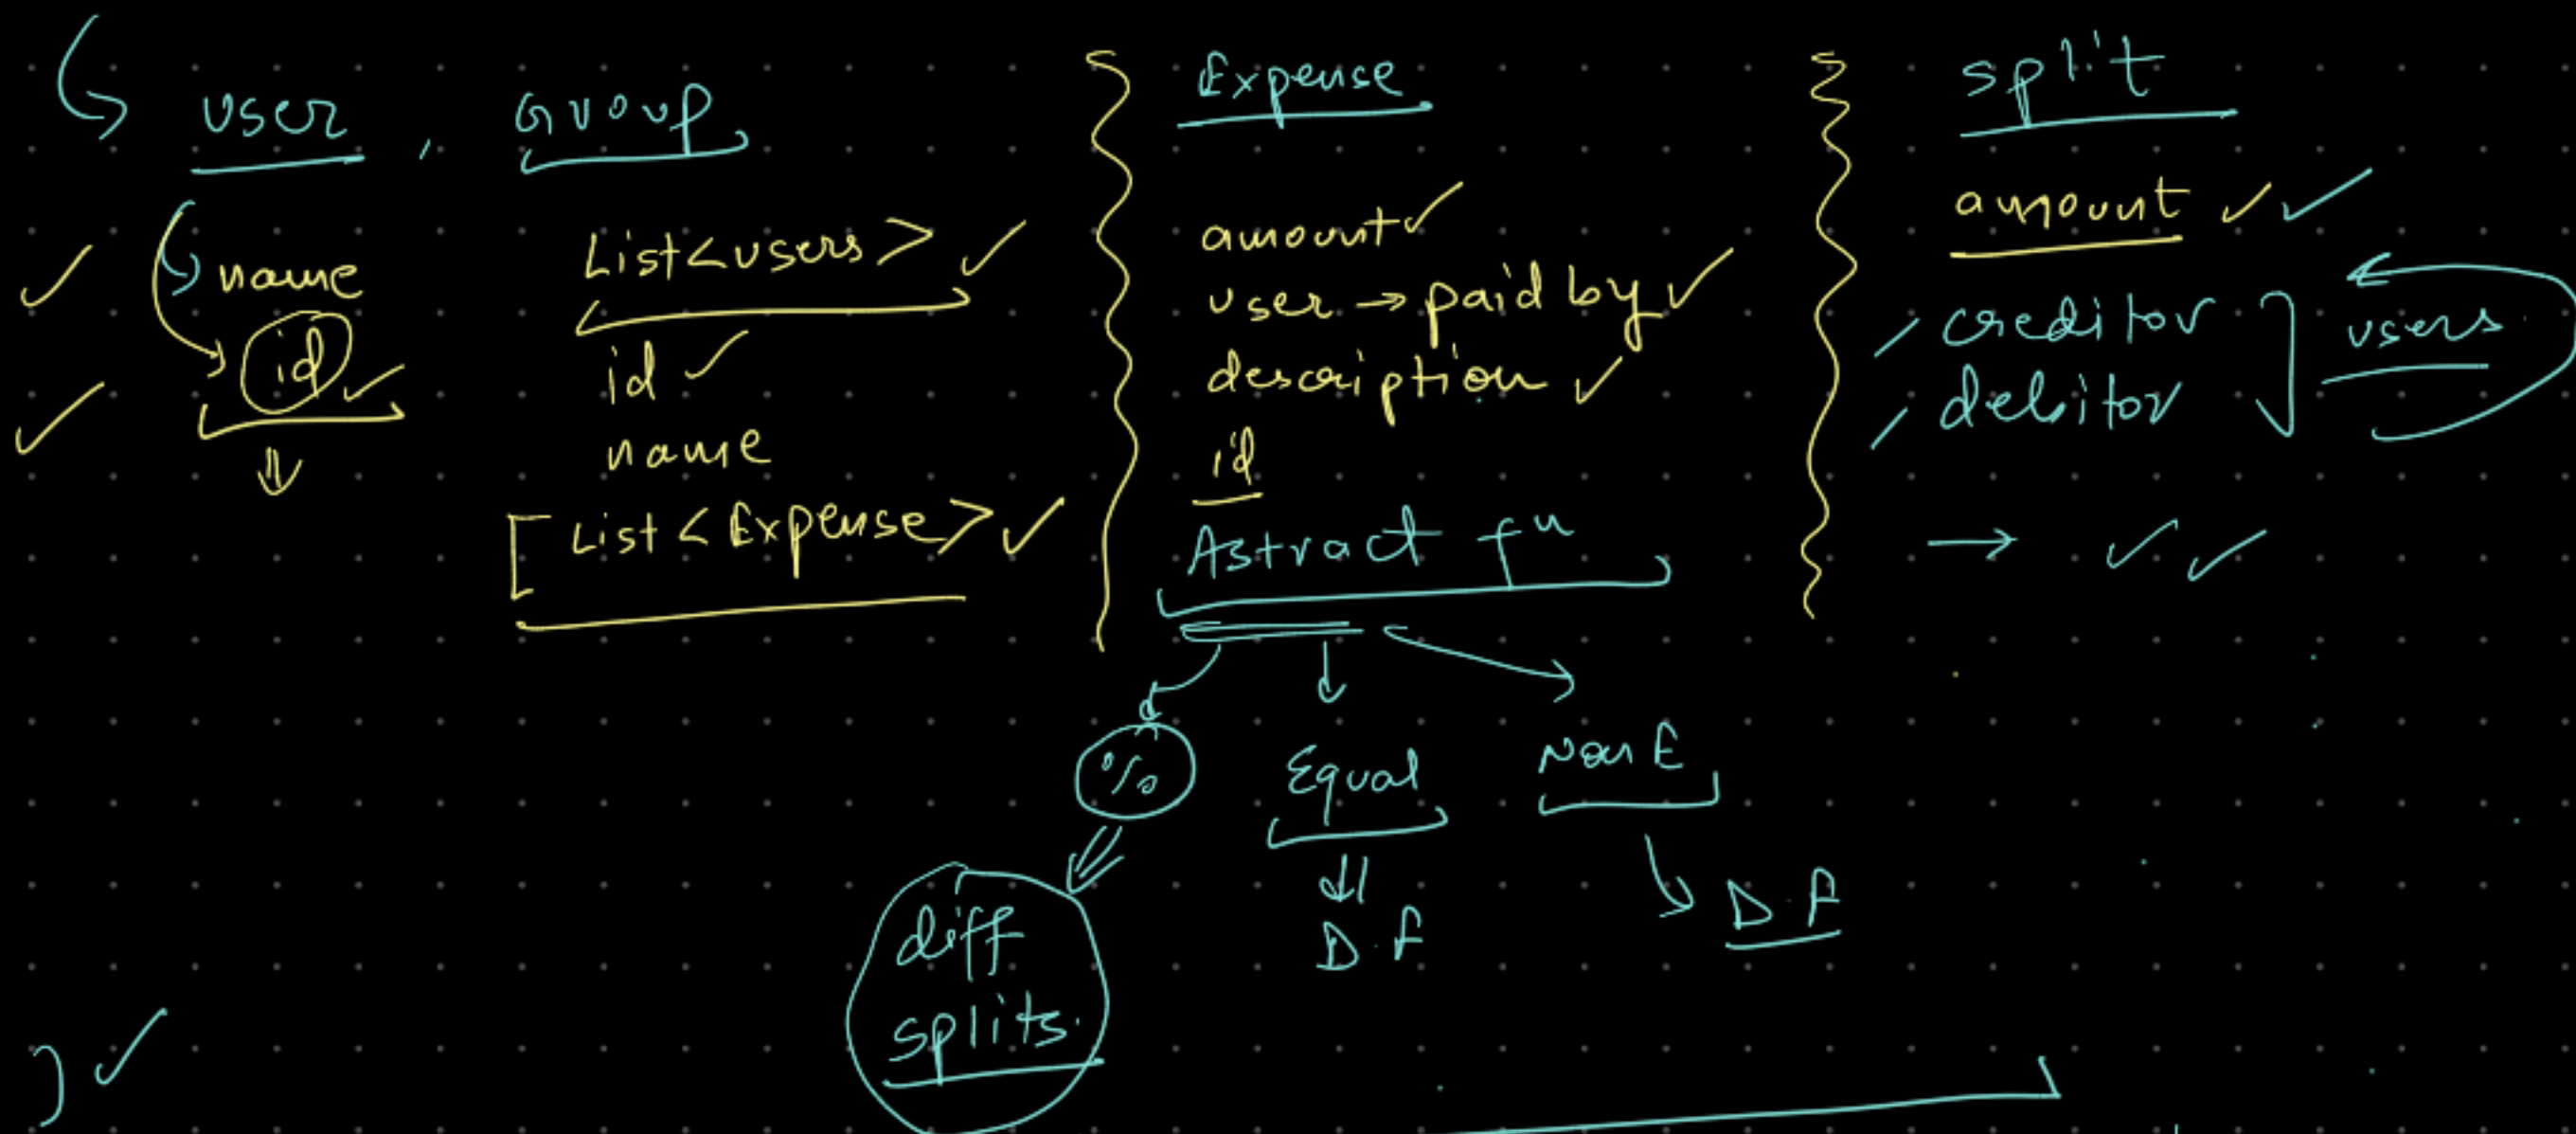

App → users → group → add their expense
↳ 3
↳ equally, percent, 50, 30, 20

1000 (u₁, u₂, u₃), [50, 30, 20] → ✓

500
300
200 } splits

[there are diff ways to create splits] from an expense
app calculates user

oops → Implement and learn through splitwise ✓

f^u() ✓

↳ List<split> → R

↳ List of user ✓

↳ List<values> → 50 20 30
↳ 500 200 300

↳ Different function for each expense type

Lets for now assume, that there are 3 ways of creating splits

equal
percentage
amount based

① create 3 fu in expense

② I create a sub-class for each expense type

Expense
abstract calculateSplits(), ✓

EqualExpense

FixedExpense
calculateSplits

Exact Amount Expense
calculateSplits ✓

List<split> calculateSplits ✓
↳ List<user>
↳ List<double> ✓

amount is passed during expense creation not during calculate splits

splitwise

↳ create user ✓

create Group ✓

↳ get overall balance (user id)

map → users → id → user ✓
map → groups → id → group ✓
